

UberHealth API

Tele-Mental Health Compliance Changelog

Date: 2026-06-15 | Base URL: <https://api.uberhealth.co.ke/api>

Backend changes aligning the API with the Kenya MoH National Tele-Mental Health Guidelines (January 2021). All changes are live in the API. The frontend must be updated to match the stricter contracts below - several are breaking.

Breaking changes (update frontend before/with this release)

1. Booking requires date of birth. POST /consultations returns 422 {requires_date_of_birth:true} if the user has no DOB on file.
2. Parental consent requires minor assent. POST /parental-consent/verify now requires minor_assent (true).
3. Recording requires prior consent. POST /consultations/{id}/recording returns 422 {requires_recording_consent:true} unless consent granted first.
4. Professional registration floor. /professionals/register and /apply now require qualification and years_experience >= 3.
5. Referral approve/reject is admin-only. Professionals calling these get 403.

New endpoints

Consent

- GET /consent/telehealth (public) - current informed-consent document {type, version, title, body, hash}. Show before signup/booking.
- GET /consent/telehealth/status (auth) - {current_version, accepted, accepted_version, accepted_at}.
- POST /consent/telehealth/accept (auth) - records explicit acceptance of the current version.

Recording consent

- POST /consultations/{id}/recording-consent (patient) - body {consent: boolean}. Must be true before a recording can be saved.

Referral feedback loop (professional)

- GET /referrals/incoming - internal referrals addressed to the logged-in professional.
- POST /referrals/{id}/respond - body {response: accepted|declined, receiver_notes?}. Notifies the referrer.
- POST /referrals/{id}/outcome - body {outcome}. Marks completed, notifies the referrer.

Supervision (professional)

- GET /supervision/supervisees - active supervisions where I am supervisor.
- GET /supervision/supervisors - active supervisions where I am supervisee.
- POST /supervision/{id}/sessions - body {session_date, duration_minutes?, notes}. Supervisor only.
- GET /supervision/{id}/sessions - supervisor or supervisee.

Admin

- GET /admin/crisis?status=unresolved|resolved - crisis-event queue.
- PUT /admin/crisis/{id}/resolve - body {resolution_notes}.
- GET /admin/audit-logs?action=&user_id= - access/audit trail.
- GET /admin/supervisions ; POST /admin/supervisions {supervisor_id, supervisee_id} ; PUT /admin/supervisions/{id}/end.

Changed endpoints

Auth & profile

- POST /auth/signup - new optional date_of_birth (YYYY-MM-DD, before today).
- PUT /auth/me - accepts date_of_birth (settable once; ignored if already set).

Booking

- POST /consultations - needs consent_accepted:true; requires DOB (422 requires_date_of_birth); minor without parental consent -> 422 requires_parental_consent. Telehealth consent auto-recorded on success.

Parental consent

- POST /parental-consent/verify - add required minor_assent (must be accepted) alongside otp and guardian fields.

Recording

- POST /consultations/{id}/recording - gated on recording consent.
- GET /consultations/{id}/recording/share - response now {share_url, consultation_id, notice} (fake expires_in removed).

AI

- POST /ai/assessment-insight - response now {insight, requires_human_referral, referral?}. referral = {message, action: find_therapist, hotlines[]}. Show a 'find a professional' CTA.
- POST /ai/chat - response now includes requires_human_referral.

Crisis & assessments

- POST /crisis/report - response now {message, event, hotlines, prompt_safety_plan:true}; escalates internally.
- POST /assessments - response now includes prompt_safety_plan (boolean).
- GET /crisis/hotlines - now the full official MoH directory (13 entries) {name, phone, available, category}.

Professional registration

- POST /professionals/register, /apply - new required qualification; years_experience minimum now 3 (was 0); new optional cpb_license, credential_document (URL).

Admin

- PUT /admin/professionals/{id}/verify - 422 if competence floor unmet (years<3, missing qualification or license).

Behavioural changes (no new UI)

- Clinical data encrypted at rest (notes, crisis content, mood notes, assessment responses, safety plans). Responses unchanged - values returned decrypted.
- Access auditing records views of patient records/safety plans, shared-session data, exports, and professional verification.
- Recording deletion now removes the stored file from disk (secure disposal), not just the reference.

Suggested rollout order

1. Add DOB capture (signup + profile) and minor-assent checkbox.
2. Add the consent document screen + acceptance.
3. Add recording-consent toggle before enabling recording.
4. Handle the AI requires_human_referral CTA and prompt_safety_plan.
5. Update professional onboarding form (qualification, credential upload, 3-yr minimum).
6. Build admin crisis queue, audit-log viewer, and supervision screens.
